PROFESSIONAL SUMMARY

Backend Software Engineering Intern at PharmEasy (Thyrocare), shipping Java and Spring Boot features to live production systems. Cut a critical business workflow from **24 hours to ∼2 seconds**, made rollbacks across **7 live services** take **under 5 seconds** (from **10–15 minutes**), and automated **100%** of a weekly manual data upload. Works across microservices, MongoDB, Kafka, AWS, Kubernetes and AI/LLM tools.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, C++, SQL
- **Backend Development:** Spring Boot, Spring WebFlux, REST APIs, Microservices, Spring Data, Kafka, ShedLock, FastAPI
- **Databases:** MongoDB (Aggregation Pipelines, Indexing), MS SQL Server
- **AI & Machine Learning:** LLMs (Claude API), PyTorch, Scikit-learn, Embeddings, Retrieval Systems, Computer Vision, NLP
- **Cloud & DevOps:** AWS S3, Kubernetes, Docker, Argo Rollouts, CI/CD Pipelines, Datadog (APM), Git
- **Software Engineering:** OOP, Design Patterns, System Design, Distributed Systems, Data Structures & Algorithms, Agile/Scrum

EXPERIENCE

PharmEasy (Thyrocare) – Software Engineering Intern *Mumbai, Maharashtra, India*
(Impact Portfolio) *Apr 2026 – Present*

- Automated a critical business workflow end to end, cutting processing time from **24 hours to ∼2 seconds** with **zero** manual work (Java, REST APIs, Microservices).
- Made production releases safer across **7 live services**, cutting rollback time from **10–15 minutes to under 5 seconds** (Kubernetes, Argo Rollouts).
- Owned billing for a new **5%/10%** volume discount A/B-tested with **∼20%** of B2B franchises; moved refunds, rewards and reports to it with **zero downtime** and built report APIs with **up to 1,000x** fewer database calls (MongoDB).
- As sole developer, automated **100%** of the weekly patient-data upload for marketing campaigns; new audiences go live with **0 code changes** (Java, AWS S3, Kafka, **46** unit tests).
- Sped up a weekly batch job from **6 hours to under 30 seconds** using distributed locking and paginated queries (ShedLock).
- Automated weekly performance reporting with an AI agent that flags spiking APIs, cutting **∼5–6 hours** of manual work to **under 2 minutes** (Python, Datadog).
- Made partner onboarding scale from **O(N^2) to O(N)** and cut order-flow database calls from **N to 1** per operation (Spring WebFlux, State Machine).
- Building an AI chatbot that answers partners' API questions from official docs; turned **1,680** support messages into its knowledge base, masking **850+** sensitive values with **zero** leaks (Python, FastAPI, Claude API).
- Shipped **5** client-facing API upgrades (JSON reports, early partial results, richer order responses, fewer API calls), fixing booking failures for eligible partners.

Samsung R&D Institute India – PRISM Research Program *Nov 2025 – Present*

- Built an AI image–text search system (CLIP) trained on **800K+** image–text pairs, reaching **∼80%** retrieval accuracy, with evaluation workflows to benchmark search quality.

PROJECTS

TOPSIS Decision-Making Package (PyPI) *July 2025*

- Built and published an open-source Python decision-making library with **6,000+** downloads on PyPI.

Adversarial Robustness of Vision-Language Models (Research Intern, TIET) *Apr 2025*

- Studied how changing a **single pixel** can fool AI vision-language models; built attack, detection and restoration pipelines for a **Springer** journal submission.

EDUCATION

Thapar Institute of Engineering & Technology **CGPA: 8.59/10**
B.E. in Computer Engineering *Sept 2022 – May 2026*

ACHIEVEMENTS & CERTIFICATIONS

- Completed **Amazon AWS Cloud Technical Essentials** certification.
- Completed **Software Engineering Job Simulation by J.P. Morgan & Chase**.
- Solved **400+** data structures and algorithms problems across competitive coding platforms.
- Participated in Google Cloud Agentic AI Day Hackathon and Gen AI Exchange Hackathon 2025.
